1. About Lleida.net

Lleida.net was founded in 1995. Starting as a local company, not only as an Internet access provider but also as a hosting service provider (web hosting and internet services). In turn, the fact of providing hosting services to IRC Hispano, the most important Spanish-language chats network in the world at the time, allowed the company's team to manage large volumes of users, as well as to detect potential communication needs in an incipient internet environment. Since its very beginning, the company has opted to develop internal innovation projects, which led them to detect an opportunity in the short message service(SMS) market and to request the mandatory authorization as an operator to the Market Commission of the Telecommunications (currently integrated in the National Commission of Markets and Competition or CNMC).

Thereafter, Lleida.net became the first SMS operator in Spain, the first to have only SMS as main service, and the first operator committed to certification services. This marks the sale of the initial business, including the hosting portfolio, and the company's commitment to be a leader in the SMS market as well as a communication operator member of the GSMA Global System for Mobile Communications Association, that is the link to international SMS traffic. This led Lleida.net to start its internationalization process. 2007 was a key turning point for Lleida.net. By analysing how customers use SMS, the need to provide a layer of legal security to the messages arose, so that the immediacy of the digital could be combined with the security paper based communications provide. And that is how Registered SMS service was developed, the embryo of the current business line "registered electronic notifications and contracting", core business of the company. This whole process was developed (and continues to be so) in-house.

International activity and the development of registered services have kept on growing, and registering telecom operator companies with licenses in the United Kingdom, the United States, Colombia and France. These years, Lleida.net has completed a wide portfolio of services relating to the certification of electronic messages and electronic processes (SMS, emails, images, etc.), combining them in such a way that the client can transform its external or internal processes into digital ones, gaining user experience and global legal security. Thus, the company provides services to clients with different profiles: from multinational banking and insurance companies interested in converting complex processes into simple and safe ones, to SME's interested in improving the quality of their communications and contracts easily. But, Lleida.net has always been a company with an international calling, and since 2013 the internationalization strategy has been focused on promoting the sale of registered communications services.

Apart from the offices opened a few years back in the United States and in the United Kingdom, Lleida.net started its expansion in Latin America (Colombia, Dominican Republic, Panama, Chile, Brazil, Uruguay, Paraguay and Bolivia), and some years later in the African continent, South Africa, making the leap, in 2017, to the Middle East. To reinforce its international presence, Lleida.net registered services obtained several patents in over 40 countries, including the United States, Japan, Israel, and EPO European countries.

In 2015 it obtained ISO 27001: 2013 certification in information security management to further increase the quality and trust of the services provided by Lleida.net.

2. Mission, Vision and Values

Mission

As the First Registering Operator, our mission consists of providing companies, public administrations and private users with secure, trustworthy, efficient and profitable electronic communications that will directly help to improve their results. We innovate to meet the needs of our clients, provide our shareholders with growing and sustainable profitability and foster the professional development of our employees.

Vision

To be the leading international operator in the market of registering electronic communications, and to be able to deliver services which are considered as industry standards. We want to make a contribution to society providing new ways of communicating to facilitate and improve relations between people and to change traditional communications processes into new technological ones.

Values

Leadership, commitment, professionalism, efficiency and team work.

Providing the highest level of service, top quality care with the greatest guarantees of security and efficiency.

A company with responsible growth, which looks after the interests of its workers, promoting their personal and professional development and balancing family and working life.

Use of services adapted to the needs of the whole of society without any physical, sensory or any other types of barriers.

3. Lleida.net in 100 words

Lleida.net is a provider of registered electronic communications services and a telecom operator in several countries. As digital witness, it provides electronic Notification and Contracting solutions, eSignature, KYC 2.0 identity validation processes, as well as SMS Solutions. Lleida.net simplifies the digitization processes and the implementation of Smart Blockchain Contracts to companies, ensuring legal certainty in their online communications. eIDAS qualified, Lleida.net is currently listed on MAB and on Euronext, and has over 100 patents in Europe, Asia, America, Africa and GCC's.

4. Being a telecommunications operator

According to the “Comisión del Mercado de las Telecomunicaciones” (Commission of the Telecommunications Market), an operator is any natural or legal person exploiting public electronic communications networks or providing electronic communications services to the public and that it has notified to the CMT the beginning of its activity.

For Lleida.net being a telecommunications operator means acting as Digital Witness, since as a telecommunications operator it has been required to cross-check information.

5. What do we do?

5.1. Sectors where it operates

a. **Digital witness**

It is a growing market linked to the use of digital communication tools from a more legally secure perspective and generating a positive user experience. Such evidence may be used before administrative or judicial authorities as documentary evidence.

b. **SMS Wholesale sector**

Aimed at operators and large companies buying and selling large volumes of SMS. This sector is more mature than the one mentioned in section a), mainly because of the experience gained in SMS technology. While the use of SMS between people (P2P) is totally residual, the use of SMS between companies and individuals (A2P) continues to experience significant growth year after year, becoming a very important tool for marketing and building customer relationships.

5.2. Lleida.net services

5.2.1. **Electronic Notification and Contracting**

Forget about paper. Generate more revenue. From any device, at any time. Designed to suit the needs of each company.

Electronic notification services

Registered SMS

Text message that can be used as evidence before a court of law.

Email that can be used as evidence before a court of law.

Registered invoice

Send invoices via Registered email.

Openum

Registered communication with proof of reading.

Registered delivery

A mailbox that certifies all incoming messages, including content and attachments.

Electronic contracting services

Registered SMS contract

Close deals by Registered SMS.

Registered email contract

Close deals by Registered email.

Click & Sign

Improving business productivity through digital transformation. SaaS solution.

Click & Sign Pro

Business solutions beyond imagination. Tailor-made contracting processes.

5.2. Lleida.net services

5.2.2. **Messaging solutions**

A global, simple and comprehensive technology. SMS texting not only for regular text messages, but also for mobile marketing campaigns, two-factor authentication codes.

SMS

Send text messages to mobile phones.

MMS

Send multimedia content to mobile phones.

Mobile Outbound

SMS with global coverage. Select the quality of the route.

Mobile Inbound

Incoming SMS with international allocated long numbers and short codes.

MNP

Database daily update.

HLR

Check the operator of the telephone number and its status on the network.

Smart Route

Choose the destination operators to which the traffic is sent, blocking or returning the rest.

5.2. Lleida.net services

5.2.2. **Messaging solutions**

Operators

Trapdoor Crawler

A2P Monetization service. Find out where your SMSs come from and improve your network security.

HUB (P2P)

Services in collaboration with other operators, offering an international interconnection network.

Registered services license

The operator license is meant to get Lleida.net whitelabel certification services.

Twin

Access our comprehensive, instant and two-way coverage. As if you had a dual SIM.

5.2. Lleida.net services

5.2.3. **eKYC services and data validation**

Services designed to optimize onboarding and communication processes.
Validate the client's identity, documents, phone numbers and email addresses.

eKYC

eKYC Docs

Validate ID's, passports and driving licenses.

eKYC OCR

Convert scanned ID images to text.

eKYC Photo

Boost eKYC Docs by adding biometric facial recognition.

eKYC Video

In person validation via video call.

eKYC Onboarding

End-to-end solution for efficient work flow.

Phone and email validation

Check All

Check the operator of the telephone number and its status on the network.

Check Network

Check which network the number belongs to.

Phone Alert

Number availability service alert.

Email Checker

Verify the operability of email addresses.

6. What are registered electronic communications for?

Registered electronic communications are a type of telematic means where a third party, oblivious to the communication, certifies that the communication took place. For Lleida.net, when we talk about registered electronic communications, we are talking about Registered SMS and email.

Conventional electronic communications are easy to manipulate. Being relatively simple for an unregistered electronic communication to be challenged in court.

Certification minimizes the risk to its lowest terms, thanks to a third party proving content and timing of the communication. To prove content, a document including a set of technical measures is provided, preventing any possible debate on such data. We issue a certificate, including our digital signature with a "hash" of the message and a time stamp from a Certification Authority. Thus, notification and contracting services are digitized while gaining in security.

7. Probative value of Lleida.net certificates

Both Article 24 of the LSSIICE, which refers to the Civil Procedure Law, as the LEC recognize electronic documents both as evidence and as notification. According to the Spanish Supreme Court Sentence 2501/2013 21st March:

A registered electronic communication (SMS or email) is in any case an item of legitimate documentary proof in court, and subject to the norms thereof:

- If not impugned, it constitutes proof in full.
- If its validity as proof is impugned, this will be determined by the judge.

The certificate is the documentary proof of the sending of the communication. It is a PDF file, designed for printing should the need arise.

On our web you will find legal reports on the validity of registered electronic communications.

8. Lleida.net spanning the world

The company provides service to more than 2,000 clients in over 40 countries, from multinational banking and insurance to SMEs.

Currently with 19 offices two of them in Spain (Lleida and Madrid) and the rest spread all over the world: London, Miami, Paris, Santiago de Chile, Bogotá, São Paulo, Tokyo, Santo Domingo, Cape Town, Montevideo, Johannesburg, San José, Lima, Beirut, Dubai, Ciudad de México and Gaborone.
